AMP assets and securities

Some assets on Liquid are securities that only approved holders may own. They are issued on Blockstream's AMP, and SideSwap marks them AMP. Here is how an issuer approves your wallet, where your AMP ID is, and how to receive, hold and trade these assets.

What AMP is

AMP is Blockstream's Asset Management Platform. An issuer uses it to put a security on the Liquid Network with rules about who may own it. Every transfer needs a second signature, given only when the issuer's rules allow it, so the asset can only move to wallets the issuer has approved.

Your SideSwap wallet holds two accounts. The Regular account takes ordinary Liquid assets. The AMP account is the one issuers approve, and the desktop app calls it the AMP Securities wallet. Both come from the same recovery phrase. Your AMP ID names your AMP account, and it is what you give the issuer.

GETTING APPROVED

Before you start

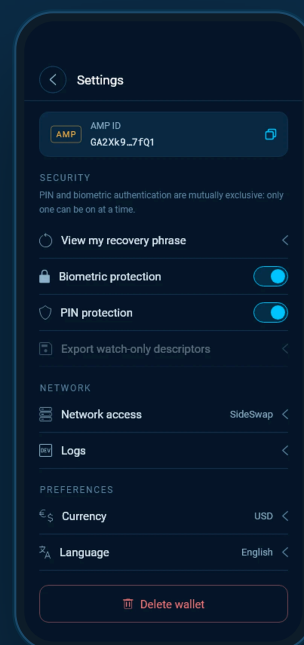

- ✓ The SideSwap app, from sideswap.io/downloads. To trade, the desktop app.
- ✓ An account with the issuer or its registration agent. Most ask you to prove who you are first. STOKR says its check may take up to 24 hours.
- ✓ The asset open to people where you live. Some issuers block certain countries.

Find your AMP ID

1 On your phone

Open **Settings**. Your AMP ID is the first thing on the page. Tap the copy button to copy it, or tap the panel to open AMP registration.

Settings

2 On your computer

In the desktop app, your AMP ID sits at the top of the wallet overview, with a copy button. Click it to open AMP registration.

Get approved by the issuer

Each issuer keeps its own list, so you register your AMP ID with every issuer or agent whose assets you want. AMP registration in the app is headed Register your AMP ID to trade securities and helps with two of them.

1

STOKR

Choose **STOKR**. Create an account with STOKR and complete their identity check, then submit your AMP ID in the STOKR portal. The app opens the portal in your browser.

2

PEGx

Choose **PEGx**. PEGx takes your AMP ID through the Auth eID app. Scan the QR code the app shows with Auth eID, then sign the request in Auth eID. The app says AMP ID was successfully submitted when it is done.

3

Any other issuer

Open the asset and its **Asset info**. The Registration Agent line links to where you register. Submit your AMP ID there, as the agent explains.

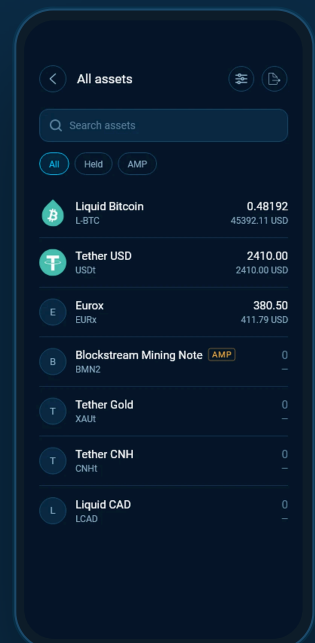

Receive and send

1

Find the asset

On your phone, tap **See all** on Home to open All assets. Tap **AMP** to list only AMP assets. Each one carries the AMP tag.

All assets

2

Receive from the asset

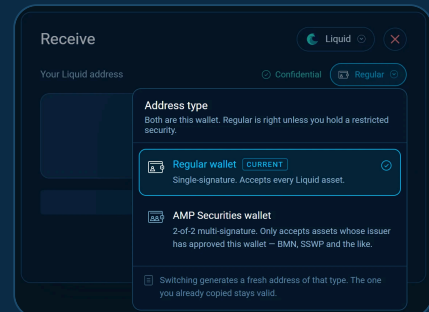

Tap the asset, then **Receive**. The address you get belongs to your AMP account. Copy it or show its QR code, and give it to the sender.

3

On your computer

Click **Receive** and choose **AMP Securities wallet** as the address type, then copy the address.

Receive

Start from the asset

On your phone, Receive on Home gives your Regular address. For an AMP asset, always start from the asset itself, so the address is your AMP account's.

Your AMP assets show on Home and in All assets with everything else. Send works as for any asset, and the app pays from your AMP account. The person you pay needs an AMP account the issuer has approved too.

Trade AMP assets

AMP assets have their own order books in the Swap Market of the SideSwap desktop app, listed under AMP. Most trade against L-BTC and some against USDt. Instant Swap does not offer them.

1

Pick the market

Open **Markets** and choose a market under AMP.

Markets

MARKETS

Stablecoin

L-BTC / USDt

L-BTC / EURx

AMP

SSWP / L-BTC

2

Place your order

Swap at the market price or place a limit order, as on any market. See [The Swap Market in the desktop app](#).

3

Unregistered AMP ID

If the issuer has not approved your wallet yet, the app says **Unregistered AMP ID** and shows where to register. Register there, then try again.

Country restrictions

Some STOKR securities are closed to people in certain countries. The first time you open such a market, the app says This asset has country restrictions and lists the blocked countries.

What SideSwap does and does not do

SideSwap is a platform provider. It makes the wallet and shows the orders people post. It does not issue securities, it does not decide who may own them, and it does not stand behind any asset listed on it.

Every trade is a swap between two wallets, built and signed by the two people trading. SideSwap is never the other party to your trade and never holds your assets.

SideSwap does not provide liquidity or marketing for securities. A trade happens only when someone else has an order on the other side.

Questions about an asset, its documents or whether you may own it go to the issuer or its registration agent. Asset info names both.

A listing is not a recommendation

SideSwap does not check or endorse the assets it lists. Read the issuer's documents and decide for yourself before you buy.

Good to know

Your AMP ID and your recovery phrase

Restoring the same recovery phrase brings back the same AMP account and the same AMP ID, so issuers still know it. A new wallet gets a new AMP ID that no issuer has approved yet. See [Back up and restore](#).

Privacy

SideSwap does not keep a list of wallet addresses linked to your AMP ID. The issuer knows the ID is yours, because you registered it with them.

Phone and computer

Use the same wallet in both apps and your AMP assets show in both. On the phone you hold, receive and send them. Trading is done in the desktop app.
