

Export your history to one CSV file

SIDESWAP GUIDE

History · Export

Available for:

HISTORY · EXPORT

Export your history

Export every transaction in your wallet to one CSV file, for your accounts, your tax return or your own records. It works on your phone and in the desktop app, and you choose where the file goes.

sideswap.io/guides/export-history · Updated 10 Oct 2026

At a glance

The file

transactions.csv

One row per transaction, oldest first

On a phone

History, then Export

Opens your phone's share sheet

On a computer

Export CSV in the desktop app

Saves where you choose

What it holds

Amounts per asset, fees and notes

No prices or values in your currency

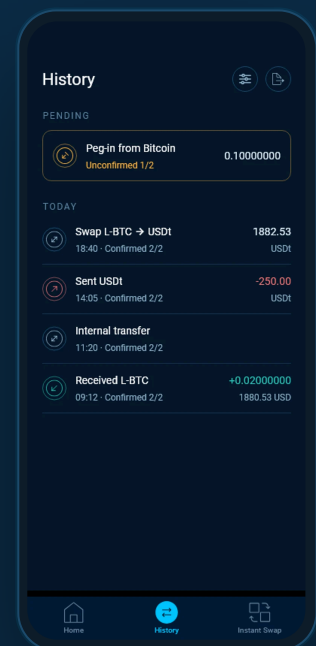

On your phone

1

Open History

Tap **History** at the bottom of the wallet and wait until your transactions have loaded. Export works once they have, and when there is at least one.

History

2

Tap Export

The **Export** button sits at the top right. Your phone's share sheet opens with transactions.csv. Save it to your files, or send it to your computer or your accountant.

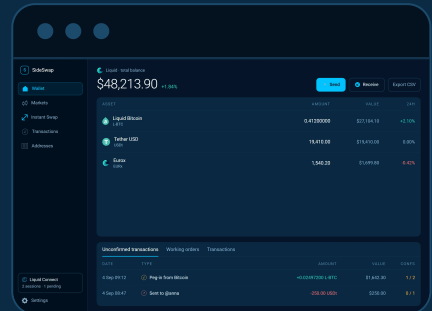

On your computer

1

Click Export CSV

In the desktop app, click **Export CSV** at the top of the wallet overview. The app loads your transactions and says how many it found.

Wallet

2

Choose where to save it

Click **Export** and pick a folder. The app suggests transactions.csv in your Documents folder.

What is in the file

Each row is one transaction. The first five columns are the same in every file, and after them comes one column for each asset your transactions moved, named after the asset.

txid

The transaction ID

Look it up on a Liquid explorer

type

Received, Sent, Swap, Internal, Peg-In or Peg-Out

In the language your app is set to

timestamp

Date and time, year first

In your device's local time

network fee

The Liquid network fee

In L-BTC

memo

Your own note

Empty if you added none

One per asset

How much of that asset moved

A minus for what left, no sign for what arrived

A swap is one row with two amounts, the asset you gave with a minus and the asset you got without. Amounts carry every decimal place of the asset, for example 0.02000000 for L-BTC.

Good to know

Opening it in a spreadsheet

Any spreadsheet opens the file. Amounts use a full stop as the decimal mark. If your spreadsheet expects a comma, import the file and set the decimal separator to a full stop.

No prices in the file

The file holds amounts, not their value in your currency. Add prices for each date from a source you trust if you need values.

Keep it private

Liquid hides amounts on the chain, and this file shows them next to each transaction ID. Share it only with people who need it.

A transaction is missing

The file holds what History shows. If History keeps loading or a transaction is missing, see [Track a transaction or a peg](#).
