

Track a transaction or a peg

SIDESWAP GUIDE History

Available for:

HISTORY

Track a transaction or a peg

Every payment, swap and peg in your SideSwap wallet is listed in History with its status. Open one to see its details, copy its transaction ID or check it on the explorer yourself.

sideswap.io/guides/track-a-transaction · Updated 9 Oct 2026

At a glance

Where

History, the second tab
Pending first, then by day

On Liquid

Confirmed 2/2
A block about every minute

A peg-in

Counts Bitcoin confirmations
Shown as 1/2, then 2/2

Check it yourself

Blockstream Explorer
Blinded, or with your amounts

Undo

Never
A confirmed transaction cannot be reversed

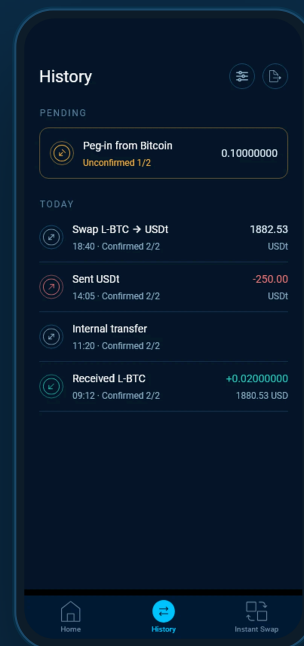

Step by step

1

Open History

Tap **History** at the bottom of the wallet. Anything not confirmed yet sits under **Pending** at the top, and the rest follows by day. Each row says what it was, such as a payment received, a swap or a peg-in, with the time and how many confirmations it has.

History

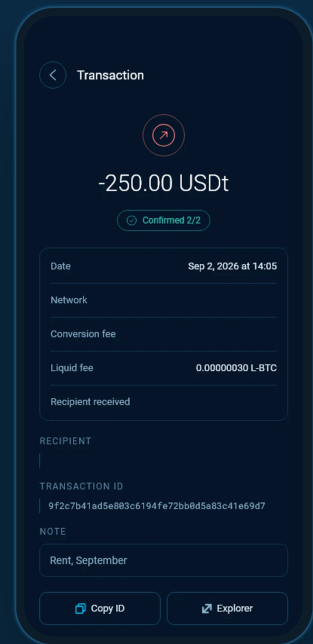

2

Open a transaction

Tap a row. You see the amount and the status at the top, then the date, the network, the fees, who received what, the transaction ID and a note you can add for yourself.

Transaction

3

Copy the ID

Copy ID puts the transaction ID on the clipboard. It is what support needs to find a transaction, so send it with any question about one.

4

Open it on the explorer

Explorer opens the transaction on the Blockstream Explorer, outside the app. Choose how you want to see it, described below.

On the explorer

Liquid hides the amounts and assets of every transaction from everyone except the people in it. That is why Explorer asks which view you want.

Blinded data

What anyone sees

The transaction and its confirmations, no amounts

Unblinded data

With your amounts and assets

Your wallet adds what it can unlock to the link

Share an unblinded link with care

Anyone who opens an unblinded link sees the amounts and assets in it. Share it only with someone who needs to see them.

Pegs

A peg-in shows in History as **Peg-in from Bitcoin**. It counts the confirmations of your bitcoin deposit, 1/2 and then 2/2. How long that takes is in [Move bitcoin to Liquid](#).

Open it and the transaction ID is your Bitcoin deposit, which any Bitcoin explorer can show. The details also show the BTC peg-in address you sent to. Explorer opens the L-BTC payment to your wallet on Liquid, as soon as it has been made.

A peg made on the sideswap.io peg page has its own tracking page. It shows the status of your order and links both transactions to the explorer. **Copy link to this page** keeps the address of that page, so you can come back to it later.

Peg-out

Peg-out returns once the new keys are issued and the peg is restored. Updates are posted on sideswap.io/news.

Good to know

History keeps loading

The app is not getting an answer from its server. Switch between WiFi and mobile data, then close and reopen the app. Your history and your coins are not affected.

A transaction is missing and the balance is too low

The wallet has probably not finished scanning. Make sure your recovery phrase is written down, then restore the wallet from it so it scans the chain again. See [Back up and restore](#). After an update, the first scan of a long history can take a few minutes, so keep the app open.

Confirmed means final

A confirmed transaction cannot be reversed, by SideSwap or anyone else. Check the recipient before you send.

Asking support

Send the transaction ID, or the tracking link of a peg made on sideswap.io. Never send your recovery phrase. SideSwap Support will never ask for it.

SideSwap guide · sideswap.io/guides/track-a-transaction · Updated 9 Oct 2026. Fees and times can change, the guide online is always current.
